

Assembly:

To assemble, you will need the following:

- Level, pencil and tape measure
- Phillips head screw driver
- Hammer
- Electric drill and 5/16 drill bit

Lay out all the parts accordingly:

- Towel rack and hooks (See Photo – A)
- Package of wall screws and plastic anchors and plastic key (See Photo – B)

Please consult with your local hardware store if you have any questions or concerns about the construction of your walls or ceilings. They can assist you in selecting the proper hardware and procedures. The generic hardware provided will work for most drywall applications.

NOTE: these units are handmade, slight variations can exist, always measure twice before drilling.

Mounting Directions:

1. Measure carefully where you want to mount the towel rack and hooks on the wall. Use a pencil to mark where the screws attach to the wall.
2. Remove the unit and drill holes using a 5/16” drill bit. If possible mount to wall studs. Supplied anchors have a pull rating of 20 lbs. or more each and a shear rating of 50 lbs. each and will work very well for non-stud applications.
3. Insert the anchors into the drilled holes. They may need to be tapped in gently with a hammer. Use the supplied key to expand the anchor behind drywall. (See Photos C to G on next page for proper and improper anchor install).
4. Screw into the prepared holes.

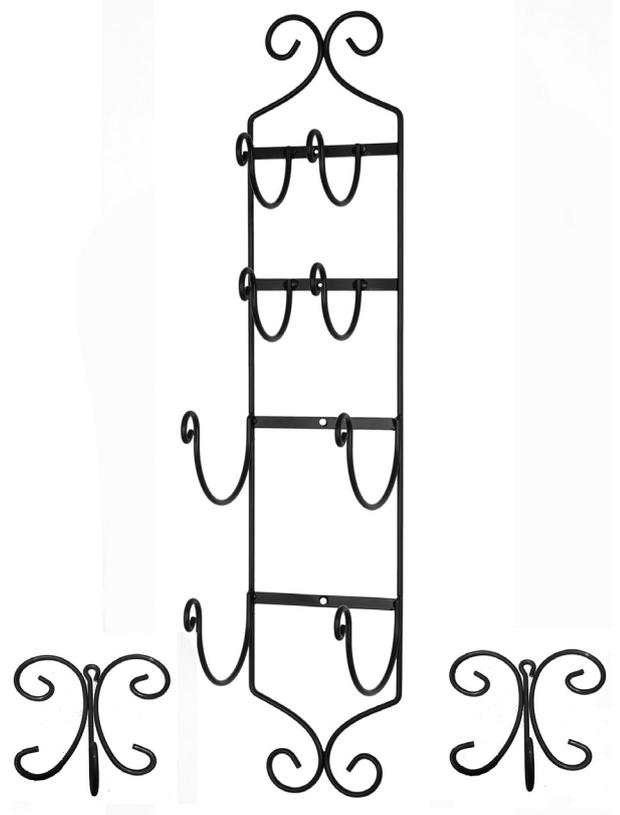

Photo A - TR-30100 Fully Assembled

Photo B - Package of Screws.
Quantity may vary based on product ordered.

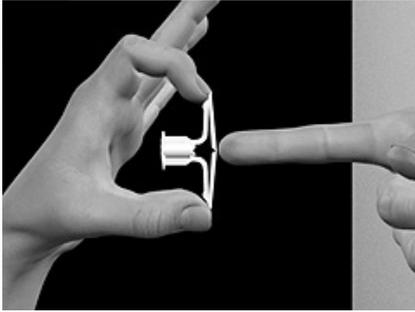

Photo C - Drill 5/16" diameter (8mm) hole. Fold anchor in middle.

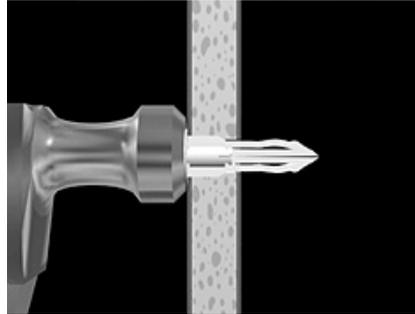

Photo D - Insert anchor in hole and tap flush with wall.

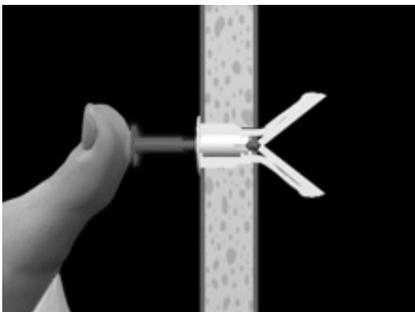

Photo E - Insert key to pop anchor open & lock behind hollow wall (not necessary for thick or solid walls). Do not force or hammer key.

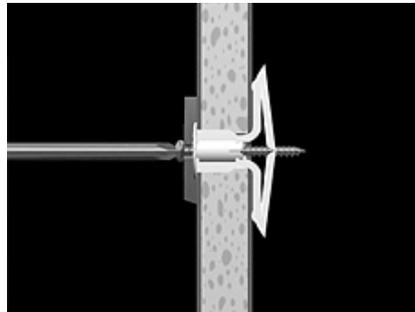

Photo F - Place item over anchor. Insert screw and tighten until screw is flush with fixture. Then, stop. The anchors also wedge securely in thick or solid walls, or in wood studs behind drywall.

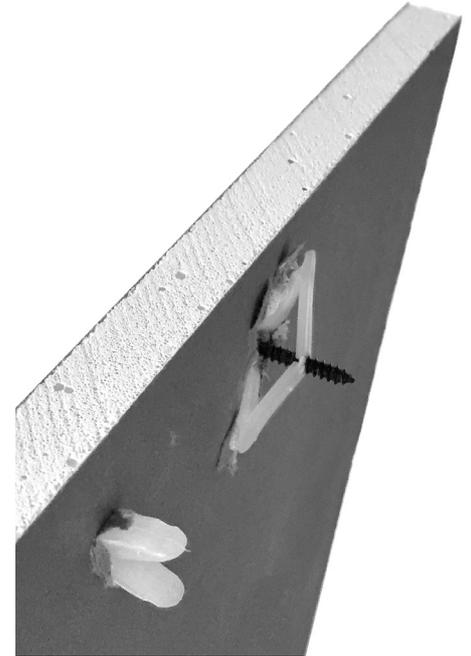

Photo G- correct (top) and incorrect (bottom).
